

Amit Gavali

GCP Cloud DevOps Engineer | Google Cloud Certified Professional Cloud DevOps Engineer

Pune, India | +91 77450 49383 | amitbabangavali@gmail.com | linkedin.com/in/aintyourcupoftea | github.com/aintyourcupoftea

PROFESSIONAL SUMMARY

Google Cloud Certified **Professional Cloud DevOps Engineer** building and operating production infrastructure on **Google Cloud Platform (GCP)** for Deutsche Börse Group's securities clearing platform, a regulated, high-availability financial system. Hands-on across **GKE, Kubernetes and OpenShift** workloads, **Terraform** and **Ansible** Infrastructure as Code for 150+ Compute Engine instances, and **Jenkins and GitHub Actions CI/CD** pipelines through change-managed production release. Delivered measurable **cloud cost optimization** (3 TB Filestore reclaimed, VPA-driven right-sizing) and strengthened **observability, incident management and root cause analysis**. Awarded a Certificate of Appreciation by Deutsche Börse Group.

CERTIFICATIONS

Google Cloud Certified - Professional Cloud DevOps Engineer, Google Cloud

Sep 2026

Credential: <https://www.credly.com/badges/8ed5b25a-8643-4ee0-9a83-5a896b2306cf/>

TECHNICAL SKILLS

Google Cloud (GCP): GKE, Compute Engine, Filestore, Cloud IAM, VPC Networking, Cloud Monitoring, Cloud Logging

Containers & Orchestration: Kubernetes, Red Hat OpenShift, Docker, Podman, Helm, Vertical Pod Autoscaler (VPA)

Infrastructure as Code: Terraform, Terraform Enterprise (TFE), Ansible, Configuration Management

CI/CD & Source Control: Jenkins, GitHub Actions, GitLab CI, Git, GitHub Enterprise, Release Management

Observability & SRE: Prometheus, Grafana, ELK Stack, Alerting, Incident Management, Root Cause Analysis

Security: IAM, mTLS, TLS/PKI Certificate Management, Access Control, Linux Hardening

Languages & Systems: Python, Bash, Go, SQL, Java, Linux (RHEL 9, Fedora), PostgreSQL, REST APIs

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS)

Pune, India

DevOps Engineer | Client: Deutsche Börse Group (C7-SCS Securities Clearing Platform)

May 2025 - Present

- Provisioned and managed GCP infrastructure as code using **Terraform (Terraform Enterprise)** and **Ansible**; built a post-provisioning framework that standardised **150+ Compute Engine instances** and eliminated configuration drift across every SDLC environment.
- Designed and operated high-availability **CI/CD pipelines** in **Jenkins** and **GitHub Actions** covering build, test, release and controlled hotfix promotion into a change-managed production environment.
- Deployed and operated containerised trade-processing workloads on **Kubernetes and OpenShift** using **Docker, Podman and Helm**, including **PostgreSQL 17 with mutual TLS** and namespace resource quota governance.
- Led a **Vertical Pod Autoscaler (VPA)** right-sizing initiative across all C7-SCS environments, delivering **recurring annual cloud cost savings**; built vpa-report.sh to flag over-provisioned workloads and normalise resource reporting.
- Reclaimed **3 TB of GCP Filestore** capacity by building SpaceWarden, a storage-governance service that enforces quotas and surfaces orphaned data.
- Implemented **observability and monitoring** with **Prometheus, Grafana, ELK Stack** and Google Cloud Monitoring/Logging, reducing detection and **root cause analysis** time for pipeline failures and production incidents.
- Developed a **Python** utility that decrypts CIL trade messages and reconciles them against PostgreSQL records, achieving **100% accuracy** in transaction verification within a regulated financial system.
- Hardened **RHEL 9 and Fedora** fleet configuration across the build and test estate, resolving TLS trust-chain, internal repository and dependency failures blocking environment provisioning.
- Automated DevOps toil with **Python** services exposing Jira, OpenShift and Jenkins operations as REST APIs, covering change requests, incident tickets, CronJob provisioning and CI/CD triggers.
- Automated associate onboarding and offboarding (Roll-on), scripting **IAM permission provisioning** and pull-request creation to enforce access-control compliance.

Back End Developer | Client: National Securities Depository Limited (NSDL)

Jan 2025 - May 2025

- Completed TCS Digital Initial Learning Program (Core Java, JDBC, Servlets, SQL, Git) and supported NSDL account onboarding and knowledge transfer.

PROJECTS

- PDF Digital Signer API:** Python/Flask REST service that merges and digitally signs PDF documents for administrative document workflows.
- Bharat Leaf Lens:** cross-platform mobile app running TensorFlow Lite and PyTorch models for on-device image recognition; published in IJRPR, Vol. 5 Issue 5, 2024.

EDUCATION

B.E. Computer Engineering, PES's Modern College of Engineering, Pune | CGPA 8.47

2024
